

## OUR QUALITY

**HT Marine and Power are very open and honest about the origin and quality of our spare parts. Our philosophy is as follows: parts such as cylinder covers, cylinder liners and pistons are sourced from high quality manufacturers mainly in Germany. Where required we can provide Class certification.**

Critical items such as fuel injection, bearings, piston rings and valves are purchased mainly from the OEM that is approved for that specific engine type. Items such as joints and seals are made in Germany or neighbouring EEC countries.

We keep a record of the batch numbers of the spares that we supply. All of our suppliers are vetted very carefully, and all parts are completely traceable back to the manufacturer. Our spares are not "grey" parts.

In addition, we have ISO 9001 approval and the necessary certification to back this up. All spares supplied are covered by our product liability insurance.

Some companies give their customers a great long list of engine types that they can supply spare parts for. However we prefer to concentrate on certain engines where we can build up good knowledge and ensure that we have a broad range of spares in stock.

The engine builder may tell you that there are risks associated with purchasing spares from the aftermarket. This is self-serving, untrue and certainly does not apply to spares supplied by HT Marine and Power. All of our spares are traceable, OEM quality and are covered by extensive product liability insurance
